FIELDS

Environmental and Natural Resource Economics, Fisheries Economics, Economic Theory

EDUCATION

PhD in Environmental Science and Management (Expected June 2027)

Emphasis in Economics and Environmental Science (EES)

Bren School of Environmental Science & Management – University of California, Santa Barbara (UCSB)

Dissertation (work in progress): Bundle quantities versus bundle fisheries in uncertain fisheries

Advisor: Dr. Christopher Costello

Committee: Dr. Christopher Costello, Dr. Andrew Plantinga, and Dr. Antony Millner

Involvement: Bren Seminars Committee Member (2025–2026); Social PhD Committee Member (2024–Present); Master of Ceremonies, Bren PhD Symposium (2025); Bren PhD Symposium Planning Committee Member (2024)

Recognition: Nominated for the Teaching Assistant Excellence Award (2024)

Master of Arts in Economics (July 2023)

Department of Economics – University of California, Santa Barbara (UCSB)

Advisor: Dr. Christopher Costello

Obtained after passing the PhD preliminary exams in microeconomics, macroeconomics, and econometrics

Master of Environmental Science and Management (June 2021)

Coastal Marine Resources Management Specialization

Bren School of Environmental Science & Management – University of California, Santa Barbara (UCSB)

Relevant Courses: Advanced Data Analysis, Geographic Information System (GIS), Advanced GIS, Conservation Planning, Conservation Planning Practicum

Group Project (Thesis-Equivalent): Quota baskets: A new approach to multispecies fishery management; Client: Environmental Defense Fund (4/20–06/21)

Advisor: Dr. Christopher Costello

Involvement: Graduate Student Association (2019–2020) Representative, KCSB Publicity Ambassador (2019–2020)

Bachelor of Economics (June 2010) | **Licentiate in Economics** (March 2015)

Universidad del Pacifico (UP), Lima, Perú

Licentiate's Proficiency Examination: Assessment of artisanal fisheries in Peru

Bachelor's Thesis: Excess correlation between Latin American stock markets

Advisor: Dr. Samuel Mongrut

Honors/Awards: Graduated in the top 5th of class (bachelor's degree)

Mauricio Collado – Page 2

JOB MARKET PAPER

Bundle Prices versus Bundle Quantities in Uncertain Fisheries

Abstract: Many fisheries cannot be regulated one species at a time, and some fisheries manage multiple stocks under a single economic instrument. I study when such bundling is desirable and whether it should take the form of a shared quota or a shared landing fee (tax), extending the constant-escapement framework of Reed (1979) and Weitzman (2002) to a multispecies fishery under ecological uncertainty.

The central condition for a well-designed basket is equalizing marginal profits across species, a condition that combines biological productivity, harvesting costs, and prices. Under this criterion, both instruments are first-best when shocks are deterministic, but under uncertainty both become second-best, with the tax outperforming the quota. The main reason for this difference is that the quota must be set before shocks are realized. As the basket grows, the quota's disadvantage is diversified away, but a second cost, the mismatch from pooling heterogeneous species, grows with basket size. Larger baskets are not always better.

Bundling improves on species-specific management only when the monitoring costs it saves exceed this pooling loss.

WORKING PAPERS

Prices versus Quantities under Complexity Constraints

Extends Weitzman's (1974) instrument-choice framework to a multi-good static setting in which regulated goods are correlated through non-separable benefits (substitutes or complements) and jointly distributed cost and benefit shocks.

Heterogeneous Discounting and Non-Renewable Resource Extraction under Weak Property Rights

Shows that heterogeneity in firms' effective discount rates—capturing institutional risk and weak property rights—generates accelerated extraction and distortions of the classic Hotelling path in a competitive non-renewable resource market.

Aggregate Quotas under Depletion Risk (with Shu-chen Tsao)

Considers a setting in which a regulator cannot distinguish species at port and therefore sets a single aggregate quota, while one species within that aggregate requires near-zero harvest to recover; characterizes the socially optimal aggregate quota under this constraint.

TEACHING EXPERIENCE

Teaching Assistant – Professor: Plantinga, Andrew (3/26–6/26)

ESM 279: Financial Management and Environmental Accounting, Bren School, UCSB, Santa Barbara, CA

- Offered weekly detailed assistance to 30 graduate students with different corporate finance backgrounds during office hours to assist with assignments
- Graded 9 homework assignments that combined financial analysis, real data, and solutions with R

Mauricio Collado – Page 4

TEACHING EXPERIENCE (Continued)

Teaching Assistant – Professor: Plantinga, Andrew (3/26–6/26)

ESM 279: Financial Management and Environmental Accounting, Bren School, UCSB, Santa Barbara, CA

- Offered weekly detailed assistance to 30 graduate students with different corporate finance backgrounds during office hours to assist with assignments
- Graded 9 homework assignments that combined financial analysis, real data, and solutions with R

Teaching Assistant – Professor: Kyle Meng (1/26–3/26)

ESM 204: Economics for Environmental Management, Bren School, UCSB, Santa Barbara, CA

- Taught economic, mathematical, and coding tools in 4 class sections per week to a total of 73 master's students with diverse economic and mathematical backgrounds
- Contributed to the modernization of the course curriculum to improve its pacing and increase the emphasis on topics such as public goods, non-market valuation, and uncertainty
- Provided additional weekly office hours to the students with more challenges in class
- Created 2 homework assignments based on real-life cases for public goods, cap-and-trade, and project analysis under risk and uncertainty

Teaching Assistant – Professor: Plantinga, Andrew (9/25–12/25)

ESM 245: Cost Benefit Analysis, Bren School, UCSB, Santa Barbara, CA

- Offered weekly detailed assistance to 50 graduate students during office hours to assist with assignments, in some cases related to their Master's Group Projects
- Reviewed lectures, materials, and final exam
- Graded 4 homework assignments and final exam for 55 students

Teaching Assistant – Professor: Kyle Meng (1/25–3/25)

ESM 204: Economics for Environmental Management, Bren School, UCSB, Santa Barbara, CA

- Taught economic, mathematical, and coding tools in 4 class sections per week to a total of 73 master's students with diverse economic and mathematical backgrounds
- Contributed to the modernization of the course curriculum to improve its pacing and increase the emphasis on topics such as non-market valuation
- Provided customized feedback on students' final essays, where they applied the course knowledge on topics of their interest
- Provided additional weekly office hours to the students with more challenges in class
- Contributed to the design of questions for assignments and exams, evaluating students' critical stance, mathematical language, and knowledge of core concepts

Mauricio Collado – Page 5

TEACHING EXPERIENCE (Continued)

Teaching Assistant – Professor: Christopher Costello (9/24–12/24)

ESM 245: Cost-Benefit Analysis, Bren School, UCSB, Santa Barbara, CA

- Offered weekly detailed assistance to 55 graduate students during office hours to assist with assignments, in some cases related to their Master's Group Projects
- Created 2 new replication course homework assignments to provide students with tools for their final projects; created the assignments inspired by 2 peer-reviewed research papers, giving students practice conducting a simplified but similar cost-benefit analysis process as used in the papers
- Graded 4 homework assignments and final exam for 55 students

Teaching Assistant – Professor: Tamma Carleton (4/24–6/24)

ESM 204: Economics for Environmental Management, Bren School, UCSB, Santa Barbara, CA

- Taught economic, mathematical, and coding tools in 4 weekly class sections per week to a total of 77 graduate students with diverse economic and mathematical backgrounds
- Reviewed the design of assignments and exams to achieve a balance between an appropriate level of difficulty and appropriate assessment of students' knowledge of core concepts
- Provided customized feedback on students' final essays, where they applied the course knowledge on topics of their interest
- Provided additional weekly office hours to the students with more challenges in class

Teaching Assistant – Professor: Christopher Costello (9/23–12/23)

ESM 245: Cost-Benefit Analysis, Bren School, UCSB, Santa Barbara, CA

- Offered weekly detailed assistance to 55 graduate students during office hours to assist with assignments, in some cases related to their Master's Group Projects
- Graded 4 homework assignments and final exam for 55 students

Teaching Assistant – Professor: Elsa Galarza (3/12–12/12)

Microeconomics I, UP, Lima, Peru

- Taught consumer and producer theory for 65 undergraduate students (2 semesters) from different socioeconomic backgrounds through exercises and test simulations (90 minutes per week)
- Reviewed the design of assignments and exams, balancing difficulty and knowledge of core concepts
- Graded 4 tests, midterm, and final exam

Teaching Assistant – Professor: Gisella Aragon (3/12–7/12)

Introduction to Economics, UP, Lima, Peru

- Taught 30 principles of economics to first-year students (1 semester) through exercises and test simulations (90 minutes per week)

Mauricio Collado – Page 6

ECONOMIC & NATURAL RESOURCE RESEARCH & CONSULTING EXPERIENCE (Continued)

Graduate Research Assistant – Carbon Market Modeling; Supervisor: Christopher Costello (7/25–9/25 and 7/26–9/26)

Environmental Market Solutions Lab (emLab), UCSB, Santa Barbara, CA

Project: A New Trade Scheme for the Offset Market (7/26–9/26)

- The idea cannot be shared for now; my work includes global carbon market modeling

Graduate Research Assistant – Literature & Paper Review; Supervisor: Christopher Costello (7/25–9/25 and 7/26–9/26) (Continued)

Project: A New Approach to Regulate Carbon Emissions (7/25–9/25)

- Contributed to identifying and collecting the evidence for costs and benefits of suppressing and preventing wildfires; organized and synthesized this information for a 6-minute speech
- Reviewed literature on 1. Temporary carbon credits, 2. Policy proposals on regulating carbon leakage, 3. Comparison of fixed caps and intensity standards to regulate emissions, and 4. The causal impacts of biofuel production on land use change.
- These reviews included identification of research gaps, limitations, and pending questions.

Project: The Supernatural and the Commons (3/25–6/25)

- Contributed to reviewing the theoretical model sections

Graduate Research Assistant – Literature Review; Supervisor: Christopher Costello (7/24–9/24)

Environmental Market Solutions Lab (emLab), UCSB, Santa Barbara, CA

Project: International Trade under Incomplete Property Rights (7/24–9/24)

- Reviewed literature on the Hotelling model, mining under uncertainty, nonrenewable resources under the commons, and general equilibrium models for minerals to assess the sand market
- Reviewed and studied international trade theory and modeling to assess the sand exploitation
- Developed the first version of a dynamic model that combines incomplete property rights, uncertainty, and international trade for nonrenewable resources

Graduate Research Assistant – Fisheries Modeling; Supervisor: Chris Free (4/23–6/24)

Environmental Market Solutions Lab (emLab), UCSB, Santa Barbara, CA

Project: [Evaluating the Conservation and Economic Performance of Fisheries Quota Baskets: a Belizean Fisheries Case Study](#) (4/23–6/24)

- Reviewed background literature about the most recent research on multispecies fisheries and Belizean fisheries to identify recent advancements in quota basket literature
- Identified, downloaded, and estimated the ecological and economic parameters of 49 species for the quota baskets designed by the Belizean Government
- Developed a flexible method to evaluate the performance of quota baskets in a data-limited setting
- Contributed to writing the final report, with special emphasis on mathematical proofs

Mauricio Collado – Page 7

ECONOMIC & NATURAL RESOURCE RESEARCH & CONSULTING EXPERIENCE (Continued)

Graduate Research Assistant – Literature Review; Supervisor: Christopher Costello (7/22–9/22)

Environmental Market Solutions Lab (emLab), UCSB, Santa Barbara, CA

Project: Literature review on fisheries (7/22–9/22)

- Reviewed literature on fisheries topics (property rights, adaptation to climate change, and dynamic optimization under uncertainty)

Research Assistant – Data Wrangling & Literature Review; Supervisor: Andrew MacDonald (6/21–8/21)

Earth Research Institute, UCSB, Santa Barbara, CA

Project: Land Use Change Impacts on Transmission of Leishmaniasis in the Amazon Basin (6/21–8/21)

- Reviewed background literature about land use change and Leishmaniasis cases in Peru
- Reviewed literature about the sandfly lifecycle and ecology
- Identified, downloaded, and wrangled social, economic, and GIS information from Peruvian, Google Earth Engine, and MapBiomass datasets
- Built a preliminary panel data model in R to evaluate the effect of deforestation on the incidence of Leishmaniasis cases in the Peruvian Amazon

Project Manager – [Sustainable Fisheries Management Master's Group Project](#) (4/20–6/21)

Client: Environmental Defense Fund (EDF) | UCSB Bren School, Santa Barbara, CA

- Managed a team of 3 graduate students, including overseeing planning, assignment, and review of tasks, communication with the client and advisors, and time management
- Developed the concept of a quota basket: a group of multiple species based on a common trait (size, trophic level, territory, etc.) and established a harvest quota to achieve its sustainable use
- Explored different grouping methods (baskets) for multispecies management, outlining the benefits, drawbacks, and potential application of each basket
- Built a fisheries model in R that demonstrates how a select few basket groupings can be a stepping stone between single-species and multispecies fisheries management

Intern – Modeling Support for Fisheries Projects; Supervisor: Christopher Costello (6/20–9/20)

Environmental Market Solutions Lab (emLab), UCSB, Santa Barbara, CA

Project: [Transformational Opportunities in Ocean-Based Food & Nutrition](#) (8/20–9/20)

- Reviewed background literature about 4 ocean-related worldwide policies (expansion of mariculture, incentives for dietary shifts, ocean habitat restoration, and improved wild fisheries management) to identify data for their impact estimation
- Estimated the potential seafood production increase, red meat production substitution, and carbon emissions reduction affected by the above 4 ocean-based policies via back-of-the-envelope calculations in Excel to facilitate the communication of results for a wide audience

Mauricio Collado – Page 8

ECONOMIC & NATURAL RESOURCE RESEARCH & CONSULTING EXPERIENCE (Continued)

Intern – Modeling Support for Fisheries Projects ; Supervisor: Christopher Costello (6/20–9/20)

Environmental Market Solutions Lab (emLab), UCSB, Santa Barbara, CA

Project: Grandfathering Rights in Fisheries (6/20–8/20)

- Reviewed 800+ lines of code in R regarding a new fishery grandfathering rights approach developed by Christopher Costello and Corbet Grainger that would redefine the assignment of fishing rights
- Assessed code by searching for mistakes, ensuring reproducibility, and assessing coherence between the R code and the draft paper

Intern – Financial Tools for Natural Resource Risk Mitigation; Supervisor: Heather Lahr (3/20–5/20)

Environmental Market Solutions Lab (emLab), UCSB, Santa Barbara, CA

Project: Financial Tools for Natural Resource Risk Mitigation – Fisheries Risk Analysis (3/20–5/20)

- Reviewed literature about risks and natural hazards in fisheries; characterized impacts of 15+ hazard variations to identify their financial traits (correlation, probability, moral hazard, timing, and impact)
- Contributed to identifying whether the existing 21+ financial tools used for ocean hazards provide adequate mitigation through a review of specific experiences
- Recommended creating new financial instruments to mitigate hazards such as storm surges and coastal floods, which are not adequately covered by existing mechanisms

Natural Resource Economics Consultant (1/10–7/16 and 6/18–9/19)

Independent Consultancy, Lima, Perú

Economic Modeling Clients & Projects

- **European Climate Fund | Decarbonization Policy Modeling:** Evaluated the impacts and synergies of deep decarbonization policies in Peru's agriculture and forestry sectors by updating the POLYSIS Model with a new forestry module; suggested that property rights, alone, do not disincentivize deforestation but are a requirement for successful policies
- **Ministry of Production (Peru) | Energy Efficiency Modeling:** Estimated the effects of improved energy efficiency in the manufacturing sector by linking the model Threshold 21 (T21)-Peru and the General Equilibrium Model of the Ministry of Production of Peru; discovered that industrial modernization would have diminished/null impact if the energy sources remain unchanged

Economic Modeling Clients & Projects

- **UN Environment | Green Economy Modeling:** Pioneered a system dynamics model of the Peruvian economy by adapting the model T21 to forecast long-term economic and social impacts of environmental policies on agriculture, forestry, and urban transportation

Mauricio Collado – Page 9

ECONOMIC & NATURAL RESOURCE RESEARCH & CONSULTING EXPERIENCE (Continued)

Natural Resource Economics Consultant (Continued) (1/10–7/16 and 6/18–9/19)

Independent Consultancy, Lima, Perú

Fisheries Evaluation Clients & Projects

- **Food and Agriculture Organization (FAO) | Peruvian Fisheries Diagnosis:** Reviewed obstacles, concerns, and recommendations about the public policies in Peruvian fisheries, conducting interviews with 60 representatives from public institutions, industry, small-scale fisher's organizations, academia, and non-governmental organizations
- **Institute of the Peruvian Sea (IMARPE) | Fishery's Data Analysis:** Analyzed the results of the third artisanal fishery survey of Peru in Stata, identifying that variables like fisher's education, access to financial resources, memberships in fisher's organization, and position in the value chain was correlated with greater income (up to 150%)
- **Inter-American Development Bank (IADB) | Regulation Assessment:** Evaluated the Maximum Catch Limits by Vessel (LMCE) in the Peruvian anchovy fishery, identifying the increased production of higher quality fishmeal products in the industrial sector, and improved prices for independent (but owners of fishing quota) fishermen (strengthened bargaining power)

Fisheries Evaluation Clients & Projects (Continued)

- **World Bank | Fishing Industry Assessment:** Assessed the impact of the Peruvian fishing industry's 2006-2012 reforms, praising the success of social compensations but alerting the industrial sector about the risk of increasing their costs of maintaining the monitoring system

Financial Analysis Clients & Projects

- **Ministry of Environment (Peru) | Financial Strategy Design:** Designed the Peruvian financial strategy against desertification and drought, identifying historical expenditure, financial sources, risks, and synergies with climate and biodiversity projects
- **Ministry of Environment (Peru) | Quantification of Financial Sources for Climate Change:** Evaluated the current state of climate finance in Peru, quantifying the different and fragmented financial sources between 2005 and 2014

Financial Analysis Clients & Projects (Continued)

- **Ministry of Environment (Peru) | Financial Instrument Proposal for Mining Social Funds:** Assessed the potential of mining and mixed funds to mitigate the risk of social conflicts by systematizing the lessons and impacts of the mining fund, "Las Bambas"
- **PhD Samuel Mongrut | Excess Correlation between Latin American Stock Markets:** Estimated the risks of contagion effects on portfolio diversification, providing evidence that stock market diversification (stocks, raw material, etc.) is not effective across countries with strong trade patterns and weak institutional capabilities

Mauricio Collado – Page 10

ECONOMIC & NATURAL RESOURCE RESEARCH & CONSULTING EXPERIENCE (Continued)

Natural Resource Economics Consultant (Continued) (1/10–7/16 and 6/18–9/19)

Independent Consultancy , Lima, Perú

Other Clients & Evaluation Projects

- **Ministry of Economy and Finances (Peru) | Public Project Formulation Assessment:** Evaluated the formulation of 65 public agriculture projects under the new Investment Management System (Invierte.pe), identifying deficiencies in the estimation of water demand and supply
- **Inter-American Development Bank (IADB) | Diagnosis of the Sustainability of Peruvian Mining:** Reviewed literature and diagnosed the mining activity in Peru considering its environmental, economic, and social impact
- **International Labor Organization (ILO) | Green Jobs Plan Design:** Designed a proposal for a National Plan of Green Jobs 2018-2021, adapting the international concept of green jobs for the Peruvian economy through the concept of potential green jobs
- **Red Cross Peru | Cost-benefit Analysis of Early Action Mechanisms:** Conducted a cost-benefit analysis (CBA) to evaluate the impact of weather forecasting instruments to mitigate the effects of frosts in Puno, floods in Iquitos, and El Niño events in Piura
- **Ministry of Production (Peru) | Diagnosis of Development Barriers (Lima):** Diagnosed the barriers to growth for the Lima region, identifying bottlenecks in public health services, industry clusters, water supply, entertainment industry, and port and airport logistics
- **Ministry of Production (Peru) | Diagnosis of Development Barriers (Ancash):** Diagnosed the barriers to growth for the Ancash region, proposing the creation of a sovereign fund to diminish corruption cases around the use of the regional mining royalties

Natural Resource Researcher (2/12–7/16)

Research Center of Universidad del Pacifico, Lima, Perú

- Quantified the benefits of the individual quota system (biomass recovery and increase in quality product) and generated enough evidence to support continued regulation in Perú
- Co-wrote and published a 10-page [paper](#) explaining need for and methods, results, and importance of the above research in *Marine Policy Journal*, condensed down from an original draft of 82 pages
- Co-authored 36-page paper, "[Fishing Rights: The Case of Peruvian Anchoveta](#)," in *Apuntes Journal*; presented findings to 20 researchers at University of Cambridge XVI Annual BIOECON conference
- [Forecasted El Niño event for the period of 2012-2062](#) using a periodogram of historical sunspots, to inform policymakers about the risk of reduction on the Peruvian agriculture GDP
- Analyzed the results of the First National Census of Artisanal Fisheries in the Maritime Area 2012, identifying the main obstacle in access to financial resources and obsolete infrastructure
- Evaluated the status of the services on information registration for agricultural, forestry, and wildlife products (Lima and La Oroya) through in-site monitoring, interviews, and dataset analysis

Mauricio Collado – Page 11

ECONOMIC & NATURAL RESOURCE RESEARCH & CONSULTING EXPERIENCE (Continued)

Natural Resource Economics Consultant (Continued) (1/10–7/16 and 6/18–9/19)

Natural Resource Researcher (2/12–7/16)

- Coordinated 4 teams of researchers (12 professionals total) in evaluating the formulation of public projects (problem and objectives, solution options, cost-benefit analysis, and environmental impact analysis) for the agriculture, sanitation, transport, and education sectors in the year 2009
- Contributed to quantifying the [damage of El Niño in the Northern coast of Peru](#)

ENVIRONMENTAL POLICYMAKING EXPERIENCE

Minister's Advisor (8/16–5/18)

Ministry of Environment of Perú, Lima, Perú

- Conducted SWOT analysis and recommended management improvements for the National Environment Fund (FONAM), renewing its prioritization of pollution remediation funds (potential of \$150 million)
- Led and monitored strategic priorities, goals, and commitments; coordinated with 10 Ministry offices and 7 affiliated agencies to achieve 79 policy and project goals, increasing completion rate from 24% to 90%
- Reviewed scientific and economic literature and designed economic improvements for 3 federal laws: climate change, modernization of waste management, and single-use plastic tax
- Reviewed literature, intervention design, and economic reasoning of 10+ federal and sectoral laws and policies about environmental quality standards
- Co-led and supervised planning for the 5-year Green Growth Strategy, which proposed 51 sustainable interventions across 19 Ministries and Agencies

Official (2/11–1/12)

Ministry of Agriculture and Irrigation of Perú, Lima, Perú

- Evaluated agrarian policies via literature reviews and cost-benefit analysis (CBA) to support creation, improvement, and continuation of water, market and financial access, and food security policies
- Supervised the design of 14 water use and efficiency indicators to evaluate the goals of the recently created Peruvian Water Authority agency and 4 Ministry offices (Competitiveness, Irrigation, Special Projects, and AGRORURAL)
- Coordinated a 3-member water policy team on the design of national indicators using the Logical Framework Analysis (LFA) to track and regulate water accessibility, efficiency, and quality
- Estimated forecasts for the demand for rice to guide the supply of the main producers of 4 regions
- Demonstrated that Peru does not have enough production capacity to replace wheat imports and showed 10 policy alternatives that could mitigate the effects of the 2011 international food crisis
- Controlled USA sugar quota for 10 Peruvian exporters and ensured fulfillment to avoid quota reduction and non-transparent quota transfers

Mauricio Collado – Page 12

ADDITIONAL EXPERIENCE

Member of Transition Commission – Ministry of Production of Peru, Lima, Perú (6/16)

Evaluated 2011-2016 administration's performance to enable transition of the new administration after 2016 presidential election; worked in a team including the potential Vice Ministers and sector advisors

Assistant – Government Services Office, PriceWaterhouseCoopers (PwC), Lima, Perú (9/10–1/11)

Advised 2 private and 23 public institutions about process improvements and Public-Private Partnerships for specific sectors (public management, water, tourism, health, and transport)

Research Assistant – Research Center of Universidad del Pacifico, Lima, Perú (3/09–12/09)

Examined the best teaching practices for undergrad students at the Universidad del Pacífico by designing and analyzing student surveys and leading focus groups with 90 students (6 groups)

Intern – PriceWaterhouseCoopers (PwC), Lima, Perú (7/08–2/09)

Identified 24 project opportunities (in agriculture, energy, water, tourism, and other sectors/fields) and evaluated their profitability and risks through financial capital asset pricing modeling, budget flow simulation, projection, and scenario analysis

FELLOWSHIPS

2019 **Sustainable Oceans Fellowship:** To perform graduate studies at the University of California, Santa Barbara (2019–2021)

2005 **Herranz Fellowship:** Full academic merit scholarship to perform graduate studies at Universidad del Pacifico, Peru (2005–2010)

CONFERENCE PRESENTATIONS

2019 **"Decarbonization Pathways in the Forestry Sector of Peru"** during the third workshop of the project *Deep Decarbonization Pathways Latin American and the Caribbean*. San Jose, Costa Rica

ATTENDED PROFESSIONAL DEVELOPMENT COURSES & TRAINING

- 2015 **Bioeconomic Modeling in Fisheries – UN Development Program**, Lima, Peru (1 day)
2014 **Household Vulnerability to Food Insecurity under Climate Change – Food and Agriculture Organization (FAO)**, Lima, Peru (1 day)
2014 **Introduction to System Dynamics and Vensim – Millennium Institute**, Lima, Peru (1 week)
2014 **Advanced Topics in Econometrics – Lambda Group**, Lima, Peru (20 hours)
2014 **Economic Implications of Glacier Loss – Andean Community**, Lima, Peru (1 day)
2011 **Food security – Food and Agriculture Organization (FAO)**, EdX (online) (120 hours)

VOLUNTEER WORK

Volunteer – "Navidad es Jesus" (Christmas is Jesus) Charity Campaign, Lima, Perú (12/03–12/05)
Collected funds, organized preliminary logistics, and entertained 70+ children (between 8-10 years old) during 5 events designed to bring presents, food, and joy to children in need during December
Volunteer – "Fe y Alegria" School, Lima, Perú (6/03–12/03)
Taught verbal and mathematical reasoning to 5 elementary students in 1-on-1 tutoring sessions

SKILLS

Computer: Microsoft Suite (Excel, Word, PowerPoint, Publisher)
Data Analysis & Modeling: R, Python, EViews, Stata, Vensim, ArcGIS, QGIS, and MATLAB
Languages: English (fluent speaker) and Spanish (native speaker)
